

Ezi-Clip Floating Floor System

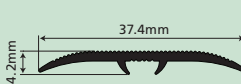

MT40 – Base

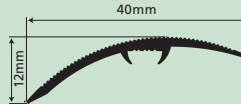

MT41 – Joiner

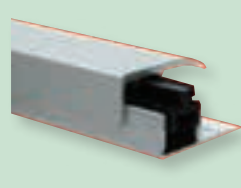

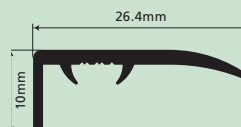

MT42 – Cover

MT43 – Ramp

MT44 – End

Ezi-Clip Base and Joiner are used together to provide a fixing to the floor, and a means of invisibly fixing the Cover, Ramp or End to the base.

Cover provides a finish to different flooring types of similar heights, or is used as an expansion joint.

Ramp is used to finish floating floors to adjoining floors of lesser heights.

End is used to finish off floating floors around the perimeter of a room, while providing required expansion gap.

Product Specifications

Product Code:	MT40	MT41	MT42	MT43	MT44
Material:	Aluminium	Polymer	Aluminium	Aluminium	Aluminium
Length:	3.30m	3.30m	3.30m	3.30m	3.30m
Visible Width:	N/A	N/A	37.4mm	40mm	26.4mm
Base Width:	26mm	9.4mm	N/A	N/A	N/A
Finishes – Bronze	—	—	✓	✓	✓
— Silver	—	—	✓	✓	✓
Lengths Per Carton:	10	10	10	10	10

Installation Instructions

Fasten base around the perimeter of the installation area by nailing, gluing, stapling, leaving a 2mm gap between track and wall.

Install floor as per manufacturer's requirement, ensuring required expansion gaps are left.

Measure and cut the End / Cover / Ramp to size using a mitre box for corners. Slide the joiner into the channel underneath the desired finishing trim and cut to size.

Position joiner and chosen finishing trim over the base. Starting at one end, press or tap firmly so that the joiner locks into the base channel, resting on the flooring hard surface.

Note: For thicker flooring, joiner may be "piggy-backed" using double height to make up required level.

Ezi-Clip cover will cater for 9° of height variation between adjoining hard flooring heights.
