[^]Coverage rates are dependent on the porosity of the timber species, stated coverage rates must not be exceeded. ^{*}Drying times are based on drying conditions of 25C and 50% humidity. Variations from these conditions may extend or reduce drying times. Please refer to the application instructions provided on the pack before commencing coating. [^] Water based Enviropro® coatings emit significantly less VOCs (volatile organic compounds) into the atmosphere than traditional solvent based finishes and meet the VOC requirements of the GBCA. So, combined with being safer to use, water based Enviropro® coatings are much gentler on the environment. ^{*} GREEN BUILDING COMPLIANT – The Green Building Council of Australia (GBCA) target for VOC level of floor coatings is less than 140 grams per litre of VOC. Water based Enviropro® coatings can be used on Green Star Buildings as they emit significantly less VOCs than the target set by the GBCA. Refer to the datasheet on www.duspec.com.au for the actual VOC level of Enviropro® coatings.
